PLAZA IDENTIFICATION / SCULPTURE

PLAZA SCULPTURES

Stingray Way

Yellow stingray (*Urobatis jamaicensis*) and two types of marine algae, *Caulerpa mexicana* and *chaetomorpha linum*.

The spread of non-native seaweed can be a grave danger to reefs and seagrass feeding grounds. People are reminded to refrain from emptying their aquarium plants into the ocean. The invasive nature of a caulerpa, similar to the mexicans species can spread and prevent the growth of native species of plants as well as animals

Turtle & Tang Lane

Green turtle (*Chelonia mydas*) and Atlantic blue tang (*Acanthurus coeruleus*) on porous sea rod (*Pseudoplexaura prorsa*)

The endangered green sea turtle, once very common along the Florida coast is now classified as endangered. It is illegal to collect, harm, or kill them, and their nesting areas are protected. The green turtle has a symbiotic relationship with the atlantic blue tang who eat by cleaning algae from the entire body of the turtle at "cleaning stations" though out the reef.

PLAZA IDENTIFICATION / SCULPTURE

PLAZA SCULPTURES

Squid Row

Caribbean reef squid (*Sepioteuthis sepioidea*) and a purple sea fan (*Gorgonia ventalina*)
The caribbean squid uses rainbow displays of color to camouflage themselves and communicate with each other. They can achieve very intense, shimmering hues sometimes communicating one message to the right and another to the left. Their enormous blue eyes represent the largest eye-to-body ratio of any animal on Earth. All in all, quite a looker!

Queen Parrotfish Promenade

Queen parrotfish (*Scarus betula*), squirrelfish (*Holocentrus adscensionis*), and four-eyed butterflyfish (*Chaetodon capistratus*) on elkhorn coral (*Acropora palmata*)
The colorful queen parrotfish a sharp beak made up of fused teeth powerful enough to scrape algae from the surface of the coral reef. Here he is seen with the nocturnal squirrelfish, frequently seen hiding in coral crevices, and the cleverly disguised four-eye butterflyfish. The elkhorn coral is considered to be one of the more important reef-building corals because it grows quickly and creates many habitats.
